WHY WINION™?

Sanitary napkins are vital to any woman's health. They stay as close friends for over 40 years during their life. The only choice then is the most comfortable, healthiest, and safest brand.

STUDENT

During my periods I couldn't concentrate in class, and couldn't even hang out with friends! I threw away all the annoyance since I started using Winlon™. It has a super subtle **surface and fits just perfectly** against my skin.

OFFICE LADY

Every time at work, I would feel that little gush and uneasy. I learned that Winlon's **quick absorbing** napkins stop side leaks, keeping me **dry and clean** without any odors. When I'm using Winlon™, I feel much more confident and beautiful.

Key criteria for success:

- Comfort: Subtle Surface, fully close touch to body
- Well-Being: Breathable Membrane, less moisture and more freshness
- Performance: Leak Guard, protection in an all-round way
- Capacity: Instant Absorption, preventing backflow
- Hygiene: Bactericidal Anion Stripe, eliminating odor
- Convenience: Refastenable Sealing Sticker, ensuring safety in use

HOUSEWIFE

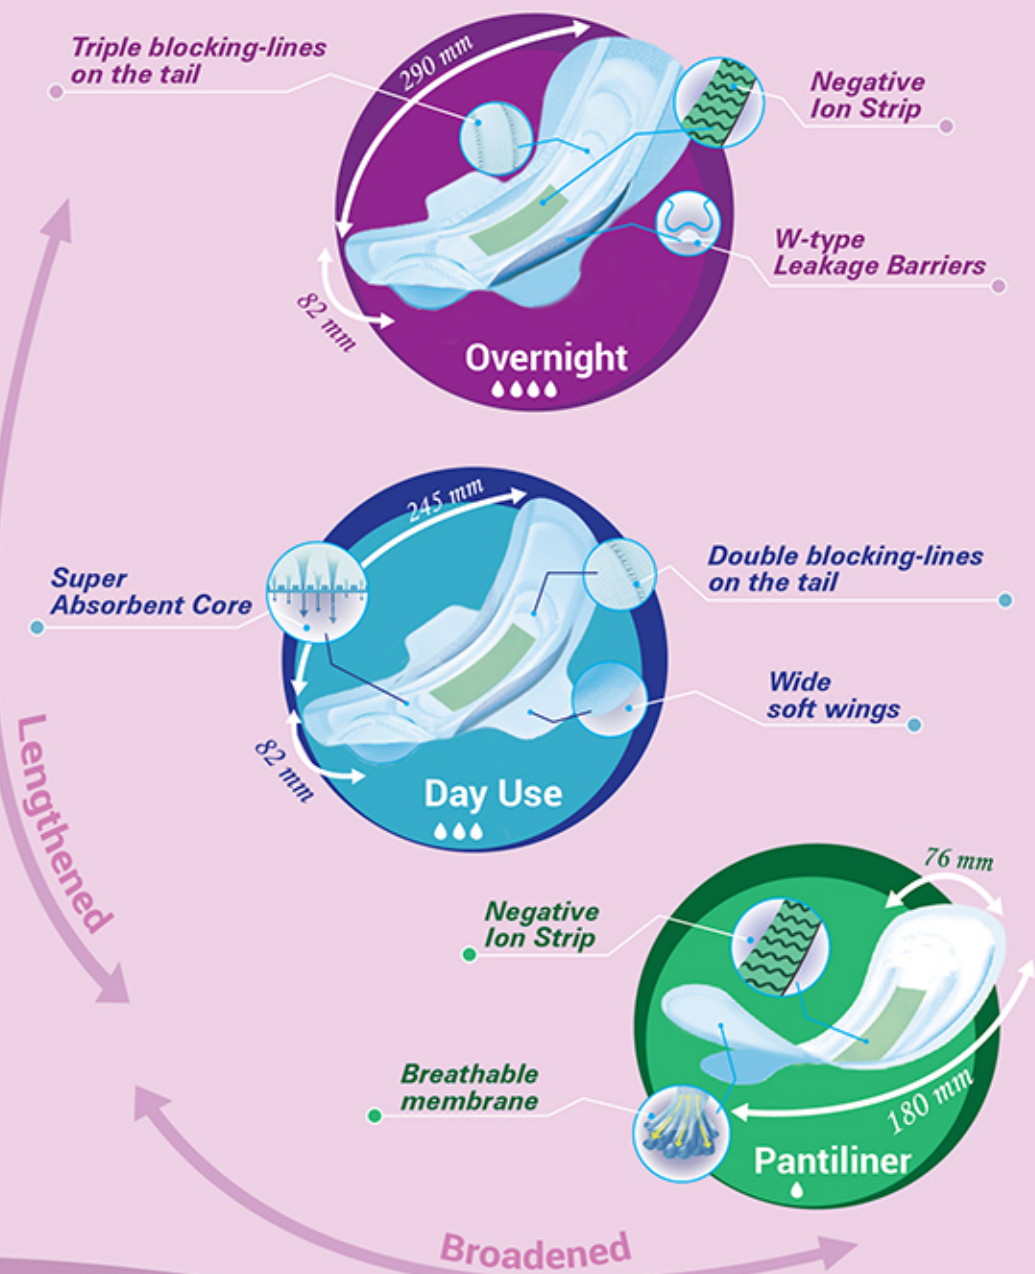

I chose Winlon™ because it's downright safe. It uses individual aluminum foil. The seal is designed with an easy to open and reseal sticky cover to protect **against bacteria** or getting **moist**, and to stop **mildew**. It really puts my heart at ease.

ATHLETE

Winlon™ **breathes well** but doesn't leak at all, so I don't need to worry about sweating anymore. It offers comprehensive coverage **stopping side leaks** so I don't have to think twice about focusing on my exercises!

EXPERIMENTAL USES

HOW TO CHOOSE YOUR MOST SUITABLE NAPKIN?

EXPOSING THE NAPKIN'S ABILITIES OF ABSORPTION AND ANTI-BACKFLOW.

Many women would feel that using sanitary napkins give off some odors and cause uncomfortable feeling and itchiness. This is why it is important to choose sanitary napkins with high absorption capability and dry surface.

INJECTION TEST

After injecting 50ml of water into the napkin and pressing a piece of tissue on it during 10 seconds.

Result: After pressing on and releasing the tissue paper, Winlon™ napkin remains comfortable, dry and clean.

EXPOSING THE AIR PERMEABILITY OF THE UNDERLYING LAYER OF A NAPKIN.

The air permeability of the napkin is also a very important factor in brand choosing. During the menstrual period, the skin specially needs a breathable environment to prevent infection or allergy problems.

VAPOUR TEST

After putting the napkin's basement membrane (layer6) on the top of a cup filled with boiling water, and placing an empty cup upside down on the membrane.

Result: Winlon™ napkin has a super ventilation capacity: the steam is quickly gathered inside the empty cup within 2 minutes.

PRODUCTION QUALITY INSPECTION REPORT

NATIONAL PAPER QUALITY SUPERVISION AND TESTING CENTER (CHINA)

Winlon™ sanitary napkin complies with the microbiological quality of Hygiene standard for disposable sanitary products, and it has the water absorbing capacity over 40 times of the napkin weight, which is 6 times higher than the national standard of "7 times".

Table: Paper Quality Supervision and Testing Center

Smiles Come from the Most Tender Care

You must know the following data...

- There are more than **300,000** women killed by cervical cancer in the world every year, which is still growing at a horrendous annual rate of **30%**.
- The youngest unmarried female suffered from cervical cancer is only **18** years old. **40%** of adult women in the world are being suffered from varying degree of reproductive system and gynecological diseases, and this proportion is as high as **83.6%** in the married women group. In here, more than **62%** diseases are caused by using inferior sanitary napkins.

Reported by WHO

Over **50%** sanitary napkins in the market did not meet the quality standards.

INFERIOR SANITARY NAPKINS

Recycled pulp filler

Industrial viscose

Toxic chemicals

Airtight plastic film

Common sanitary napkins = BACTERIA BOMB

- Female's pelvic cavity, uterus, vagina are interlinked with external environment, so it is easy to be invaded by external causative agent. Especially during the period, the immunity of reproductive organs will decline, therefore, if using the sub-standard sanitary napkins, infection rate will increase.
- Menstrual blood is rich in nutrients, so bacteria will breed easily under this condition.
- After using common sanitary napkins for **2 hours**, the total surface bacteria count can reach **107 units/cm³**.

Sanitary napkins are vital to any woman's health.
They stay as close friends for over **40 YEARS**
during their life.

A woman approximately needs to use **15,000** pieces of
sanitary napkins.

High quality products best care

External Packing

Adopting aluminium film packing with food grade; special design of seal which can be used repeatedly; the packing is moistureproof, anti-fake and anti-microbial.

Inner Packing

Each piece of sanitary napkin is produced on aseptic production line and packed automatically; adopting 360 degree full packing design, which can avoid secondary contamination; saver and cleaner.

Healthcare Technology

Anion

Anion chip will rub under proper humidity and temperature conditions, and release 4000-6000/cm³ Anion. It can restrain anaerobic bacteria's reproduction, and partly enhance female's microcirculation, improve the growth of bio-enzyme, regulate acid secretion, and increase the self-defensive ability of female body.

Antibiosis factors

Zirconium phosphate carrying silver nanometer antibiosis factors powder added and combined with functional fiber can kill germs and have long antimicrobial effect; harmless to the human body, nonirritant to skin, and preventing infection by other bacteria.

Biomagnetism

Ferrimagnetism material is added in the chip, which make the sanitary napkins produce biological magnetic field. It can activate incarnate bioelectricity to increase body immunity and prevent various diseases. Meanwhile, this fiber contained strontium element has an effect of preventing skin and vagina pruritus.
